

## Tutorial 4

Date            

Page   

- 1) Design a Moore machine that function as a pattern recognizer for "1011". Your machine should output a '1' whenever this pattern matches the last four output inputs, and there has been no overlap, otherwise output a '0'.

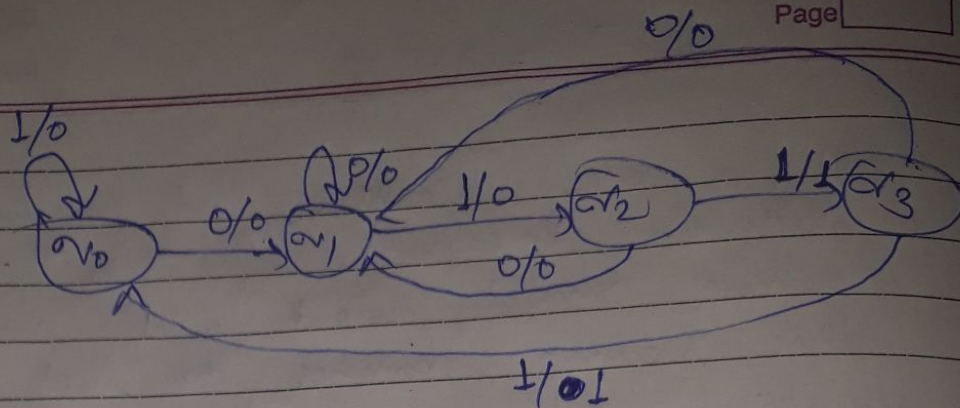

Ans

	0	1	output
q <sub>0</sub>	q <sub>0</sub>	q <sub>1</sub>	0
q <sub>1</sub>	q <sub>2</sub>	q <sub>1</sub>	0
q <sub>2</sub>	q <sub>0</sub>	q <sub>3</sub>	0
q <sub>3</sub>	q <sub>2</sub>	q <sub>4</sub>	0
q <sub>4</sub>	q <sub>2</sub>	q <sub>0</sub>	1

- 2) Construct a Mealy machine for a Simple Sequence detector for the Sequence 011. Include three output that indicate how many bits have been Received in the correct Sequence.

Input 0			Input 1		
State	out		State	out	
s0	s1	0	s0	0	
s1	s1	0	s2	0	
s2	s1	0	s3	1	
s3	s1	0	s0	1	

3) Convert in to Mealy Machine.

Ans

moore's

	a	b	out
→ A	C	D	1
B	D	C	0
c	B	C	1
D	C	B	1

Mealy's

	a	out	b	out
→ A	C	1	D	1
B	D	1	C	1
c	B	0	C	1
D	C	1	B	0

4)  
Ans

Convert in to Moore machine.

Mealy →

	0	out	1	out
→ A	A	1	B	0
B	D	1	D	1
C	B	1	C	1
D	C	0	A	1

	0	out	1	output
A	A	1	B <sub>0</sub>	0
B <sub>0</sub>	D	0	D	0
B <sub>1</sub>	D	1	D	1
C <sub>0</sub>	B <sub>1</sub>	1	C <sub>1</sub>	1
C <sub>1</sub>	B <sub>1</sub>	1	C <sub>1</sub>	1
D	C <sub>0</sub>	0	A	1

Moore machine

	0	1	Final output
A	A	B <sub>0</sub>	1
B <sub>0</sub>	D	D	0
B <sub>1</sub>	D	D	1
C <sub>0</sub>	B <sub>1</sub>	C <sub>1</sub>	0
C <sub>1</sub>	B <sub>1</sub>	C <sub>1</sub>	1
D	C <sub>0</sub>	A	1
